## **Case Study**

### **Nashville Innovation in Teaching and Learning for Technological Education**

The Nashville State Community College (NSCC) in partnership with WGBH Educational Foundation in Boston is engaged in a materials development project in order to continue the development and expand the use of Problem Based Case Learning in community colleges, and elsewhere, to improve the technical workforce for the global economy of the 21st century. Innovation in Teaching and Learning for Technological Education (ITLTE) will produce and disseminate media-rich train-the-trainer and end-user materials for Community Colleges participating in the project. The goal is to increase the number of trainers and end-users who design, develop, and implement PBCL experiences. Hezel Associates was involved from the beginning of the proposal writing in the design of the evaluation plan. Hezel Associates is responsible for instrument and protocol development, carrying out the data collection and analyzing the data and making cogent recommendations based on the findings from this four-year project.
